Features Introduced in Telemetry Agent 1.0

The following are the new features introduced in Telemetry agent 1.0.

Feature Name	Feature Description
Appliance VM Image	Virtual machine appliance for easy Telemetry agent deployment.
Auto Update Script	For the appliance only. This script keeps the CLI and docker compose files updated to automate major upgrades.

Limitations

The following are limitations associated with Telemetry agent 1.0.

Issue ID	Description
TA-367	The Telemetry agent does not support IPv6 addressing (IPv4 support only).
TA-338	The Telemetry agent does not support high availability (HA).
TA-350	You cannot view Telemetry agent metrics in the web interface.
TA-219	The Telemetry agent does not support importing of custom certificates for managing the agent.
TA-67	You cannot view agent logs in the web interface.

Known Issues

The following are known issues associated with Telemetry agent 1.0.

Issue ID	Description
TA-352	There is an issue that prevents the job detail pagination from working.
TA-361	There is an issue In the agent web interface when accessed through the Safari web browser where the user session is unexpectedly terminated when registering or deleting Panorama™ devices from the pop-up dialog.
TA-270	There is an issue that prevents the Device List tab from displaying as active, or selected, when you navigate to the Device List page.
TA-358	There is an issue that results in a device-list pagination error after you remove all items from the second and last pages.
