

EXPEDITION Release notes

Ver: 1.1.8
Date: March 6, 2019

To upgrade your Expedition instance run the commands below from the CLI.

```
$sudo apt-get update  
$sudo apt-get install expedition-beta
```

New features in this release

Feature	Description
PanOS 9.0 CSV log import for Machine Learning	PanOS 9.0 traffic logs are now supported for analysis by machine learning algorithm.
XML file import in PanOS format	When exporting the XML file, the zip file now contains 3 files, the set commands, the compressed version of the XML configuration and the PanOS version, named "<project name>_pretty.xml".

Issues fixed in this release

Issue	Description
Cisco ASA - NAT policies missing destination IP	Corrected an issue with ASA migrations where the destination NAT IP was not being added
Cisco ASA - services with same name import	When importing Cisco configurations with same named service objects, differentiated by protocol (TACACS TCP and UDP services in this issue) both are now imported correctly.
Interface TCP-MSS settings not migrating correctly from a PanOS source configuration	Corrected an issue where custom TCP-MSS settings were not being merged correctly
Service override timeout settings not migrating correctly from a PanOS source configuration	Corrected an issue where custom service override timeouts were not being merged correctly
